CONTROLMASTER®

Get the most out of your project by maximising your shovel's operation

Shovel support

Maintaining the safety of track or rubber tyred dozer operators involved in shovel face clean-up and maintenance can dramatically interrupt the work cycle of shovels. With increased reliance on larger yet fewer machines to maximise profits, surface miners are looking to minimise these interruptions to revenue-earning production.

RCT remote control solutions remove the operator from his machine and place him at a safe working distance from both the shovel, the dozer and potentially unstable mining ground or digging faces.

RCT has over 40 year's experience with machine control & safety solutions. Others talk; we are the real deal, with over 1000 working examples in 60 countries. If you're in the business of moving dirt we're in the business of helping you do it safely, so let's talk.

Features

- Multiple options of remote control
- Minimising OHS issues
- Maximising productivity of prime moving equipment
- Complete manual/remote flexibility
- Complete technical support & training
