

## REMOTE OEM WORKSHOP SERVICING

Reduce unexpected downtime, help maintain productivity and minimise disruption on site.

RCT is one of the only companies to offer hire and service exchange options for its hardware. This empowers clients with greater flexibility during servicing and unexpected downtime periods.

This offering ensures a site always has the equipment necessary to continue to carry out work, which would otherwise result in downtime and loss of production, which is costly.

### HIRE UNITS

RCT has a large range of product support hardware available for hire. Ideal for short-term projects and for covering service/repair periods of existing products. All remote hardware is available from Telecabins, through to remote sets, cameras, Teletransmitters and Guidance controllers.

### SERVICE EXCHANGE

RCT has service exchange readily available. Customers can send all hardware (from interfaces to fire controllers) to the nearest branch where they will be inspected and reported upon. If the servicing value exceeds 75 percent of the new product, the customer can opt to purchase a service exchange unit at a competitive price; with a warranty in place.

RCT can provide express servicing when required to accommodate time constraints.
