

# SMART TECHNOLOGY DRIVING PRODUCTIVITY

## Independent Guidance

The ControlMaster® Guidance system considerably reduce impact of operator error, managing to increase the operational efficiency and productivity.

With state-of-the-art technology, overcoming major obstacles, it prolongs machine life, keeping the machine in the mine longer.

Setting a benchmark for productivity, the system continuously looks for ways to meet production targets. Independent Guidance features automation mining features.

This feature is an expansion of the Independent Guidance and allows the machine to tram autonomously, that the machine will tram itself, allowing the operator to control steering and work. When the path is completed, the Independent Guidance system returns to a repeatable tramming.

Independent Guidance takes the stress out of operating machines on narrow and difficult to navigate underground drives, resulting in less fatigue, less machine downtime, and significant gains in productivity and profitability.

## Features

- V3 Guidance is real time responsive.
- No Mine Map required – no setup cost for mapping/user friendly setup installation.
- Increase tramming speed and size of machine operating in mine.
- Independent Guidance Mode.
- Guidance delivers consistent reliable machine operation continuously.
- Incorporates speed control – allows machine to travel at the correct speed to suit the current mine conditions.
- Not machine brand specific.
- Can be fitted to new or existing machines.
- Uses existing Telematics communication system – no additional communication infrastructure required.
- Fully supported by RCT’s service team globally.
