

Prevent unnecessary accidents and secure your equipment

ISOLATOR LOCKOUT

The AusProTec™ Lockout Lever kit is designed to allow machine operators to lock their vehicle's power supply in the OFF position using a padlock device.

The lockout lever kit is commonly used to prevent unnecessary accidents whilst a machine is being serviced. Accidental starting may cause personal injury or property damage. The lockout lever kit also acts as an anti-theft device preventing the machine's engine from being started whilst locked in the OFF position. A simple, yet effective device in maintaining equipment safety and security.

The lockout lever kit suits the AusProTec™ Isolator switch, Part No. 1700. A pre-assembled kit containing both the lockout lever kit and isolator switch is also available, Part No. 0041.

The lockout lever kit is recommended for use with padlocks with a 7mm diameter shackle.

Parts

- APN: 0041
- APN: 1700
- APN: 4300
