

Warning personnel of active Machine Containment System.

Machine Containment System Warning Light

The ControlMaster® Warning Light for Machine Containment System informs the remote loader operator where the scanner barrier is located within the production level so they do not breach the scanner with the machine.

In addition, it alerts personnel approaching the production level that a remote loader is actively operating within that level and not to disrupt the scanner barrier.

The lighting's enclosure is specifically designed to be bolted on the top of the scanner mount, and when the containment system has been set, it will activate three high-intensity, flashing red lights.

When the scanner barrier has been tripped, the warning enclosure will stop flashing, to indicate that the system operation has stopped.

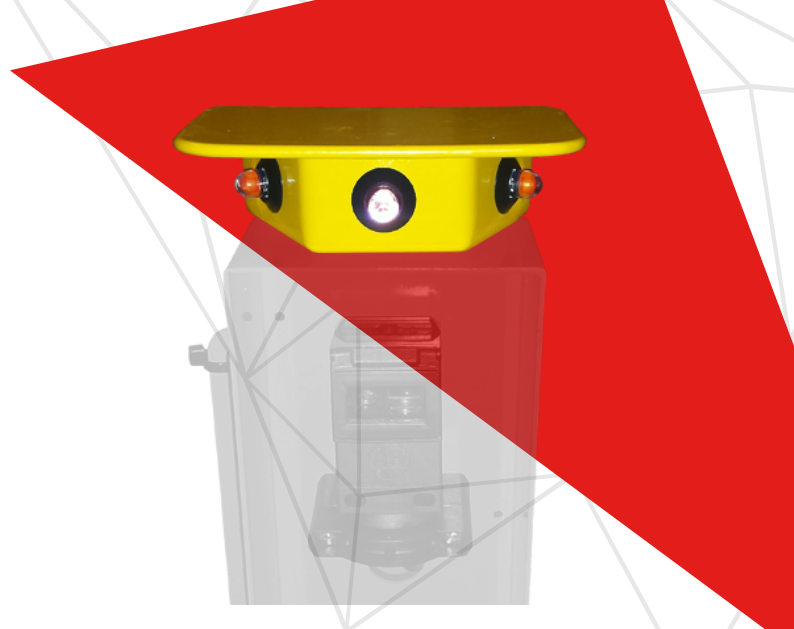

Caractéristiques

- Improves mining safety
- Know where the scanner barrier is located with visual alert
- Powder-coated steel enclosure
- Designed to withstand the elements
- 3x red ultra-bright flashing LEDs
