

# When excess idle is excessive

## Excess Idle Control

Excess idle on machines will lead to higher fuel costs and more wear and tear on engines.

The Muirhead® Excess Idle Controllers are designed to keep idle time to a minimum, reducing fuel costs and engine wear and tear.

With built in engine and ground speed sensing, the unit will know when the machine is stationary and when it's idling. A warning will be activated when the engine is in excess idle mode.

Controllers come in shutdown or warning only with idle and excess idle time fully adjustable.

## Features

- Adjustable idle and excess idle time
- Solid state
- Available with looms and switches
- Suitable across all machine applications
- In built diagnostics

## Specifications

|                       |                     |
|-----------------------|---------------------|
| IP                    | 65                  |
| Supply Voltage        | 9 to 35 volts       |
| Operating Temperature | -35 to +85 C        |
| Current Draw          | 700 milliamps       |
| Dimensions            | 120mm x 80mm x 65mm |
| Weight                | 255g                |

## Parts

- APN: 12362      CONTROLLER EXCESS IDLE SHUTDOWN
- APN: 12476      CONTROLLER EXCESS IDLE WARNING WITH GROUND SPEED DETECTION
- APN: 12738      LOOM EXCESS IDLE (T/S 12476 AND 12362)
