

Simple minesite road watering management

WATER SPRAY CONTROLS

The Muirhead® Water Spray Controllers are used on all surface mine sites to manage haul roads.

Controllers are available in manual and fully programmable automatic.

The manually controlled panel allows the operator to adjust the rate of water dispersed, the operator assess the amount of water required and simply adjust the proportional output via the potentiometer.

The automatic system is pre-programmed to disperse the water based on the speed of the truck. The controller can be programmed to suit specific watering applications or site specific conditions.

Controllers are available with up to 6 spray head outputs for individual control, auto/ manual function switch, three adjustable speed settings, one shot pulse and an adjustable constant pulse setting. Controllers have been designed to interface into a OEM mobile water truck control panel or are self contained with switches and indicators.

There is a controller available to suit all Water Truck applications.

Features

- Fully adjustable manual potentiometer timer
- LED and switch controls
- Regulates water dispersion
- Reduces watering costs
- Prevents accidents resulting from over watering
- Maintenance free

Parts

- 🔧 APN: 2774 WATER SPRAY TIMER VARIABLE
- 🔧 APN: 8995 WATER SPRAY TIMER VARIABLE WITH AUTOMATIC / MANUAL SWITCHING
- 📁 APN: 9990 POWERMASTER SOFTWARE
- 🔧 APN: 10910 VARIABLE SPRAY CONTROLLER AUTO / MANUAL CUSTOM PROGRAM

Specifications

Voltage	12 to 24 Volts
Technology	Solid state
IP	65
Control	Fully programmable
